

Log Files Suck. There's a Better Way.

Surface complete context for every error and slowdown directly in your logs to easily reproduce and resolve any issue.

OverOps Picks up Where the ELK Stack Leaves Off

Get more value from your ELK Stack investment with the help of OverOps.

With the OverOps ELK Stack integration, surface the complete state of the code and environment for any error or exception directly within your log files. In one click, get the data you need to reproduce and resolve your most critical code-level issues before they impact your customers.

Identify all critical code errors and slowdowns in each release

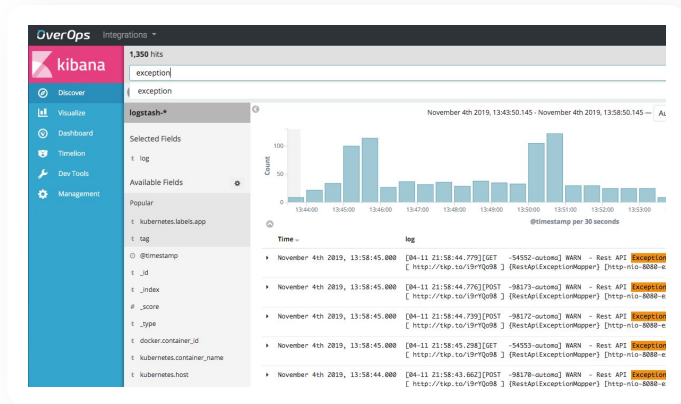

Prevent unreliable releases from being deployed into UAT and production

Resolve issues with complete code variables, DEBUG logs and host / container state at the moment of event

Reproduce and Resolve Any Issue

Go beyond log files to capture code-level insights for every error, exception and slowdown in your applications – even the ones you didn't see coming

Get the True Root Cause in One Click with OverOps Log Links

- **Instant access** to OverOps directly from your logs
- **Surface complete context** within your existing workflow
- **Drill down deeper** to understand any log error

Know Why Code Breaks & Resolve Any Issue

- **Exact state of the code** across the entire call stack
- **Code variables and objects** – 10 levels deep into the heap
- **Complete environment state** – CPU and memory, thread and environment variables
