

The Developer-First APM Solution

See the source code and variable state for EVERY error directly in your logs to easily reproduce and resolve any issue

Get more value from your ELK stack investment with OverOps

With the OverOps ELK Stack integration, surface the complete variable state for any error or exception directly within your log files. In one click, get the data you need to reproduce and resolve your most critical code-level issues before they impact your customers.

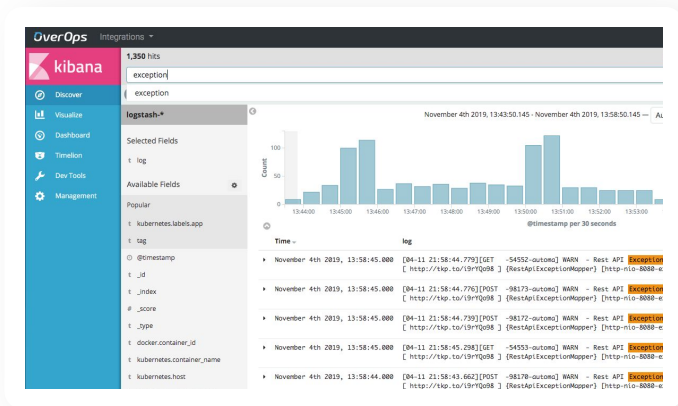

- Get deep context on EVERY issue found in your Elastic logs and APM
- Reduce escaped defects, lower MTTI/MTTR
- End-to-end CI/CD pipeline coverage
- Unified visibility across your entire ecosystem

Reproduce and Resolve Any Issue

Go beyond logs to capture code-level insights for every error, exception and slowdown in your applications – even the ones you didn't see coming

Discover the True Root Cause in One-Click with OverOps Loglinks

- **Instant** access to OverOps directly from your logs
- **Surface** complete context within your existing workflow
- **Identify** the source code and variable state at the moment of error

Know Why Code Breaks & Resolve Any Issue

- **See** the stack trace, source code and variable state for every error
- **Assign** new issues to the right developer, at the right time, with the right data
- **Capture** the relevant TRACE & DEBUG level logs, and the state of the host or container
